<b>Abstract :</b> <p>The air traffic statistics obtained from the CFMU for the ECAC airspace are used to determine the coverage of European air traffic by the Base of Aircraft Data (BADA). BADA consists of a set of aircraft models used at the EUROCONTROL and other organisations, such as ANSP's, research organisations, governmental regulatory transport agencies and universities. The uses of BADA vary from aircraft trajectory simulation in Air Traffic Management (ATM) research and development to the modelling and strategic planning of traffic flows in ground based ATM operations. For the statistics provided in this report, a 12 month period of traffic data has been used (Jan.-Dec. 2012). The results show that the aircraft types within BADA 3.11 cover 93.17% of the European air traffic for the whole period, compared to the annual target of 90%. The synonym aircraft occupy a further 6.68% share of the total traffic.</p>

## 1. INTRODUCTION

### 1.1. IDENTIFICATION AND SCOPE

This document reviews the air traffic statistics for 2012 from the EUROCONTROL Centre Flow Management Unit (CFMU) in order to determine the coverage of European air traffic provided by BADA (Base of Aircraft Data) Revision 3.11 [RD1].

BADA 3.11 is a collection of ASCII files, which specifies aircraft performance and operating procedure parameters for 150 different aircraft types (direct models<sup>1</sup>). From these models a further 255 other aircraft types can be supported as being equivalent. They are referred to in this note as synonym types.

The BADA information is designed for use in trajectory simulation and prediction algorithms within the domain of Air Traffic Management (ATM). All files are maintained within a configuration management system at EUROCONTROL Validation Infrastructure Centre of Expertise (VIF) located at the EUROCONTROL Experimental Centre at Brétigny-sur-Orge, France.

### 1.2. ORGANISATION

This document is presented in three sections. The first section includes a list of referenced documents and a glossary of acronyms.

The coverage statistics are summarised in Section 2 with a conclusion in Section 3.

Appendix A provides the 2012 CFMU Traffic data.

Appendix B provides the BADA 3.11 coverage figures for the models and synonyms.

---

<sup>1</sup> In this note only 147 BADA aircraft models will be referred to. The 3 generic fighter models FGTN, FGTH, and FGTL do not hold an official ICAO code and do therefore not appear amongst the CFMU traffic data. They will however be referenced to when covering the BADA 3.11 synonym aircraft.

### 1.3. REFERENCED DOCUMENTS

## 2. CFMU TRAFFIC STATISTICS

The CFMU air traffic is used as a representative sample to identify the current traffic mix of aircraft types. The choice of BADA aircraft models is targeted to reflect this traffic make up. When a corresponding BADA model is not available, a synonym equivalent can be proposed.

For each BADA release, a sample traffic provided by the CFMU is used to provide a statistical comparative coverage of the BADA current models. For this coverage report, a 12 month period of traffic data has been used (January-December 2012). The CFMU registered traffic figures list all aircraft types that flew through ECAC airspace. Aircraft are listed in descending order (rank) based on the number of total flights per aircraft type. For each aircraft type the following information is provided in Appendix A:

- Aircraft type identifier <sup>2</sup>
- Total number of flights
- Reference to BADA or Synonym type model
- Percentage of flights
- Cumulative percentage of flights.

The following table provides a summary of information for the 2012 statistics.

**Table 1: Traffic Sample Summary Information**

	Sample traffic 12 months (2012)
Total number of flights	9684084
Number of aircraft types in traffic sample	622
Number of aircraft types for 90% coverage	66
Number of aircraft types for 99% coverage	179
Number of aircraft types for 99.90% coverage	298
Number of aircraft types for 99.99% coverage	387

<sup>2</sup> All aircraft types refer to ICAO aircraft designators in force at the time of data retrieval [RD2].

### 3. COMPARISON WITH BADA

Appendix B provides a list of the aircraft types modelled by BADA 3.11 [RD1]. In this list the aircraft types are ordered alphabetically by the ICAO code. For each of the aircraft types, the percentage of air traffic and ranking, as specified by the CFMU statistics, are provided.

1. The BADA 3.11 model types provide **93.17%** coverage. This figure is up by **1.79%** when compared to the previous coverage report of BADA 3.10 in 2011 (**91.38%**) [RD3]. The 147 aircraft types modelled by BADA are not the most important types in the CFMU traffic sample. That is according to the CFMU data, the top 147 aircraft types provide **98.17%** coverage. 3 aircraft models did not appear in the traffic sample (AN38, F28 and DC94).
2. 23 new models have been added to BADA 3.11. 22 of these new models were found in the sample traffic and have provided a further **1.74%** share of the total traffic figures.

<b>YK42</b>	<b>0.020%</b>

3. 1 new synonym TBP type (LNP4) was added to BADA and was found in the traffic sample sample providing a mere 0.0005%. BADA 3.11 contains 255 synonym aircraft types. The total BADA 3.11 synonym coverage represents **6.68%** of the total traffic sample. The synonym share of the traffic is down when compared to the 8.44% share in the previous coverage report in 2012 [RD3]. This is partially due to the fact that 18 previous synonym types have been removed and remodelled as direct models (A124, AN24, AN28, C25A, C25B, C25C, C525, C680, H25B, IL76, IL86, IL96, P28T, PA44, PA46, T204, YK40, YK42). No synonym types were withdrawn.
4. 52 synonym aircraft were not found among the traffic sample which contains 622 aircraft types. The missing synonyms are composed mainly of 'aging' airliner types, military fighter aircraft and recently delivered light piston aircraft.
5. The generic helicopter synonym (HELI) is considered as an equivalent for all helicopter aircraft types. In this traffic sample it can be considered to represent 47 helicopter types (1.09%).

BADA 3.11 has achieved the target 90% coverage of aircraft types within the CFMU air traffic.

The addition of the next significant aircraft, not modelled by BADA 3.11 (see Table 3) would have provided an additional 0.68% coverage.

**Table 3: Aircraft not modelled in BADA 3.11 with high traffic share**

Rank Number	Aircraft Code	Name in Full	% Traffic
30 <sup>th</sup>	CRJ7	RJ-700 REGIONAL JET	0.68%

#### 4. CONCLUSION

BADA 3.11 currently covers 99.85% of the European air traffic as specified by the EUROCONTROL CFMU. The 147 original BADA aircraft models account for **93.17%**, while 255 synonym aircraft account for **6.68%** of the traffic data. The remaining aircraft types, not covered by BADA, are composed of 229 different aircraft types (0.16%).

The original model coverage is up by 1.79% when compared to the coverage of BADA 3.11 in 2012. The target original model coverage has been met due to the addition of aircraft models which have regularly held a high share in the CFMU data. Despite reaching this target coverage, new aircraft models shall be added subject to the availability of new reference aircraft data.

As a consequence of the increase in model type coverage, the associated synonym types were removed for modelling and the overall synonym coverage fell by 1.76%. In view of the wide-spread operational use of BADA, increased synonym coverage will remain a continual aim for BADA.
